

SYSTEM AND METHOD FOR IDENTIFYING A WIRELESS SERVING NODE
FOR A MOBILE UNIT

ABSTRACT OF THE DISCLOSURE

A system and method for identifying a wireless serving node for a mobile unit include the ability to receive a wireless registration request at a control node for a wireless serving node cluster and determine a control node associated with the registration request by using an algorithm on a mobile unit identifier in the registration request. The system and method also include the ability to generate a wireless registration response containing an identifier for the control node associated with the registration request if the control node is not the control node associated with the registration request.
